Joint PPS "Managing Digital Transformation in the Health Sector" (2024-today)

(<https://qa.auth.gr/el/studyguide/600000737/current>)

27/08/2024

Table of Contents

| | |
|---|-----------|
| Semester A | 3 |
| Organisations and services in the health sector | 3 |
| Managing the digital transformation in healthcare | 6 |
| Health data and information systems | 9 |
| Healthcare resource management | 12 |
| Regulation, legislation and structures in health | 16 |
| Technology and society | 19 |
| Ethics and privacy in health | 22 |
| Management, innovation and entrepreneurship in healthcare | 25 |
| Semester B | 28 |
| Social and individual approach in health | 28 |
| Service design | 31 |
| Health data classifications and exchange formats | 34 |
| Data analytics and machine learning | 37 |
| Deep learning and computer vision in health | 39 |
| Technologies in interoperable ecosystems in health | 42 |
| E-health and telemedicine | 45 |
| Cybersecurity for Health Systems | 48 |
| Sensors for medical instrumentation and signal processing | 51 |
| Semester Γ | 54 |
| Master's thesis | 54 |

Semester A

Course Description Form

(1) GENERAL

| | | | |
|--|---|-----------------------------|-------------|
| FACULTY | Health Sciences | | |
| SCHOOL | Medicine | | |
| CYCLE / LEVEL | Postgraduate | | |
| CODE | MH01 | SEMESTER | 1 |
| TITLE | Organisations and services in the health sector | | |
| Autonomous Didactic Activities | | HOURS OF INSTRUCTION | ECTS |
| Lectures Reading Assignment Project Written assignments | | 3 | 6.0000 |
| TYPE OF THE COURSE <i>background, general knowledge, scientific area, skills development</i> | General Foundation | | |
| PREREQUISITES: | | | |
| LANGUAGE OF INSTRUCTION AND EXAMINATION: | English (Instruction, Examination) | | |
| THE COURSE IS OFFERED TO EXCHANGED ERASMUS STUDENTS: | | | |
| URL: | https://qa.auth.gr/class/1/600256593 | | |

(2) LEARNING OUTCOMES

| Learning Outcomes | |
|---|---|
| <p>The students are able: • to describe national and international health and wellbeing policies and models in local contexts; • to critically analyse and apply knowledge about health and wellbeing regulations, agreements, funding instruments and bodies; • to recognize the needs for multi-professional and cross-cultural health care and social wellbeing service development.</p> | |
| <p>General Competences Taking into account the generic competences that must be acquired by the graduates of AUTH (as they are described in the Diploma Supplement and presented as followed) which ones are intended by the course?</p> | |
| <p>Retrieve, analyse and synthesise data and information, with the use of necessary technologies</p> <p>Adapt to new situations</p> <p>Make decisions</p> <p>Work autonomously</p> <p>Work in teams</p> <p>Work in an international context</p> <p>Work in an interdisciplinary team</p> <p>Generate new research ideas</p> | <p>Design and manage projects</p> <p>Appreciate diversity and multiculturality</p> <p>Respect natural environment</p> <p>Demonstrate social, professional and ethical commitment and sensitivity to gender issues</p> <p>Be critical and self-critical</p> <p>Advance free, creative and causative thinking</p> <p>.....</p> <p>Other...</p> <p>.....</p> |

Apply knowledge in practice, Retrieve, analyse and synthesise data and information, with the use of necessary technologies, Adapt to new situations, Make decisions, Work in teams, Work in an international context, Work in an interdisciplinary team, Respect natural environment, Advance free, creative and causative thinking

(3) COURSE CONTENT

The course starts with a pre-assignment in which students analyze and describe their home country's health and wellbeing systems. The joint sessions start with a flipped classroom approach, in which students will present their findings in class. During joint sessions, students will then discuss key differences and similarities between countries. The course also includes lectures by external professionals within the health and wellbeing sector. During the course, students will do a project in groups. This group work project consists of an interview with a health and wellbeing sector professional, with the aim of mapping challenges and possibilities related to digitalization. The interviewee can be a person from the public, private, or third sector in health sector. In an individual assignment, students write an essay where they synthesize their learning. The essay includes an assessment of how different health and wellbeing systems can respond to different health objectives.

(4) DIDACTIC AND LEARNING METHODS - ASSESSMENT

| | | |
|---|---|-----------------|
| MODE OF DELIVERY <i>Face to face, Distance Learning</i> | Distance learning | |
| USE OF INFORMATION AND COMMUNICATION TECHNOLOGIES <i>Use of ICT in Course Teaching, Laboratory Teaching, Communication with Students</i> | Use of ICT in Course Teaching, Use of ICT in Communication with Students, Use of ICT in Student Assessment <i>Description:</i> | |
| COURSE ORGANIZATION <i>Lectures, Seminars, Laboratory Work, Fieldwork, Reading Assignment, Tutorial, Internship, Clinical Practice, Artistic Workshop, Interactive Teaching in Information Center, Field trips and participation in conferences/seminars /activities, Project, Written assignments, Artistic creation, Other.</i> | Activities | Workload |
| | Lectures | 39 |
| | Reading Assignment | 21 |
| | Project | 20 |
| | Written assignments | 70 |
| | Total | 150 |
| STUDENT ASSESSMENT <i>Description of the procedure</i> | <i>Description of the procedure:</i> | |
| <i>A, Assessment methods, Formative or Summative, Written Exam with Multiple Choice Questions, Written Exam with Short Answer Questions, Written Exam with Extended Answer Questions, Written Exam with Problem Solving, Written Assignment, Report, Oral Exams, Performance / Staging Laboratory Assignment, Clinical Examination of Patient, Artistic Performance, Other / Others</i> | <i>Assessment methods:</i> Written Assignment (Formative, Summative), Report (Formative, Summative) | |

(2) LEARNING OUTCOMES

| Learning Outcomes | |
|---|---|
| <ul style="list-style-type: none"> • L01: Explain and understand the concept of digital transformation and its significance in healthcare management. • L02: Identify and evaluate key technologies driving digital transformation. • L03: Analyze the impact of digital transformation on healthcare delivery, patient care, and organizational processes. • L04: Apply principles of health informatics to support data-driven decision-making in healthcare organizations. • L05: Assess the opportunities and challenges associated with electronic health records implementation. • L06: Describe the role of telemedicine in improving access to healthcare services and patient outcomes. • L07: Utilize data analytics for informed decision-making. • L08: Discuss the ethical and privacy considerations related to the use of digital technologies in healthcare. • L09: Develop strategies for effectively engaging patients in their healthcare through digital tools and platforms. • L010: Design and propose a digital transformation plan for a healthcare organization. | |
| General Competences <i>Taking into account the generic competences that must be acquired by the graduates of AUTH (as they are described in the Diploma Supplement and presented as followed) which ones are intended by the course?</i> | |
| <i>Retrieve, analyse and synthesise data and information, with the use of necessary technologies</i> | <i>Design and manage projects</i> |
| <i>Adapt to new situations</i> | <i>Appreciate diversity and multiculturality</i> |
| <i>Make decisions</i> | <i>Respect natural environment</i> |
| <i>Work autonomously</i> | <i>Demonstrate social, professional and ethical commitment and sensitivity to gender issues</i> |
| <i>Work in teams</i> | <i>Be critical and self-critical</i> |

Work in an international context
Work in an interdisciplinary team
Generate new research ideas

Advance free, creative and causative thinking

(3) COURSE CONTENT

CP1. Introduction to Health Information Systems and Data: Overview of health information management. Importance of health data for healthcare provision and decision-making. Introduction to health information systems and electronic health records (EHRs) CP2: Health data collection and standards. CP3. Data interoperability in healthcare. CP4. Health data management and analysis. CP5. Clinical decision support systems (CDSS) CP6. Implementation of Health Information Systems: Selection and acquisition of systems. System implementation methodologies. Change management and user adoption strategies. CP7. Future trends in health data and information systems: Big data and analytics in healthcare. Artificial intelligence and machine learning in health data analysis. Personalized medicine and precision computing in healthcare.

(3) COURSE CONTENT

This course provides an in-depth exploration of healthcare management, focusing on resource allocation, collaboration strategies, inventory management and quality improvement. Through a series of modules, students will develop the skills and knowledge needed to optimize healthcare delivery, integrate advanced technology, and implement effective leadership practices.

Module 1: Resource allocation strategies

M1.1 Basic principles of resource allocation
 Topics: Introduction to resource allocation in healthcare, Economic principles in resource management
 Learning Outcomes: Understand the basic concepts and importance of resource allocation in healthcare. Understand the economic principles underlying resource management decisions.
 Understanding of the principles of resource management and resource management principles: Short reflection paper.

M1.2 Models and theories of resource allocation
 Topics: Overview of resource allocation models, Ethical theories and their application.
 Learning Outcomes: Identify and compare the different models used to allocate resources in healthcare. Understand ethical considerations and theories in resource allocation.
 Evaluations: Case study analysis, participation in online discussion.

M1.3 Tools and techniques for resource optimisation
 Topics: Quantitative tools (e.g. linear programming, simulation), Qualitative decision-making approaches
 Learning outcomes: Learn to apply quantitative tools to optimize resource allocation. Appreciate the role of qualitative approaches in decision making.
 Assessments: Assessment: Assignment, peer assessment exercise.

M1.4 Resource allocation in practice
 Themes: Strategies to address challenges
 Learning Outcomes: Analysis of real case studies to understand practical challenges. Develop strategies to address common resource allocation challenges.
 Evaluations: Individual Essay.

M1.5 Future trends and innovations in resource allocation
 Topics: Impact of technology and innovation
 Learning Outcomes: Explore emerging trends and innovations in healthcare resource allocation. Evaluate the impact of technological developments on resource allocation strategies.
 Assessments: Presentation, proposal of an innovative solution

Module 2: Collaborative strategies to optimise healthcare

M2.1 Integrating mobile computing for resource management
 Topics: Role of mobile computing, Applications in resource management
 Learning outcomes: Understand the integration of mobile computing in healthcare. Analyze the benefits and challenges of mobile technology.
 Assessments: Assessment: Quiz, reflection assignment.

M2.2 Strategic Management: Optimising procurement and business operations
 Topics: Optimisation of business operations
 Learning outcomes: Learn strategies for effective procurement in healthcare. Understand the principles for optimizing business operations.
 Evaluations: Case study analysis, Group work.

M2.3 ICT for clinical resources
 Topics: ICT applications in clinical resource management, Improving healthcare delivery
 Learning outcomes: Identify key ICT tools for clinical resource management. To assess the impact of ICT on healthcare delivery.
 Evaluations: Assessment: Assignment, peer review.

M2.4 Strategic leadership: optimising resource management
 Themes: Leadership strategies, Integrating technology and leadership
 Learning Outcomes: Develop leadership skills for resource management. Understanding of the role of technology in strategic leadership. How to understand the role of technology in managing technology transfer: Individual Essay.

Module 3: Inventory management and supply chain optimisation

M3.1 Introduction to healthcare supply chain management
 Topics: Challenges and opportunities
 Learning outcomes: Understand the components and importance of the healthcare supply chain. Identify challenges and opportunities in supply chain management.
 Assessment: Quiz, short essay.

M3.2 Inventory management principles
 Topics: Types of stock, basic management techniques (e.g. JIT, ABC analysis)
 Learning outcomes: Learn the types of stocks and their management needs. Understand basic inventory management techniques.
 Evaluations: Case study analysis, quiz

M3.3 Technology in supply chain and inventory management
 Subjects: Various technologies (e.g. RFID, IoT).
 Learning Outcomes: Understand the role of information technology in optimising supply chains. Explore various technologies and their applications in healthcare.
 Evaluations: Group presentation, reflective journal.

M3.4 Data analytics for supply chain optimisation
 Topics: Application to supply chain decisions
 Learning outcomes: Understand the basic

principles of data analytics for supply chain decisions. Analyze data to improve inventory management and reduce waste. Assessments: Assessment: Practical work, peer review M3.5 Ethical and sustainable supply chain practices Subjects: Strategies for sustainable management Learning Outcomes: Recognise the importance of ethics and sustainability in supply chains. Develop strategies for sustainable inventory management and ethical sourcing. Assessments: Sustainability plan, online forum discussion. Module 4: Improving quality and patient safety in healthcare M4.1 Basic principles of quality in healthcare Topics: Historical perspective Learning outcomes: Understand the concept and dimensions of quality in healthcare. Recognise the development and importance of quality improvement efforts. Assessments: Assessment: Quiz, reflective essay M4.2 Measuring and monitoring quality Themes: Techniques for measuring quality Learning outcomes: Learn to select and use appropriate quality measurement indicators to assess quality. Develop skills to monitor and evaluate quality improvement initiatives. Evaluations: Individual analysis. M4.3 Basic principles of patient safety. Topics: Principles of patient safety, Common challenges and strategies Learning outcomes: Understanding of the basic principles of patient safety. Identify common safety challenges and effective strategies. Assessments: Simulation exercise, reflective journal M4.4 Culture of quality and safety in healthcare Topics: Leadership and team dynamics Learning outcomes: Identify the key elements of a positive quality and safety culture. Understand the role of leadership and teamwork in promoting this culture. Assessments: Team presentation, discussion on leadership styles

(3) COURSE CONTENT

Programme Content (PC) PC1: Different models of wellbeing productions eg. Institutional, neoliberal, populist and residual welfare state regimes. PC2: Different visions of digital transformation in health and wellbeing. PC3: Different examples of the products implementation and roadmaps of digital service pathways. PC4: Well-being and its promotion and prevention as a concept. PC5: The values of Eu and at the level of fundamental rights in the EU and its member states. PC6: The national and Eu-level regarding the structures of Eu policy making and regulations. PC7: Regulatory frameworks for Eu- Health and Wellbeing digitalisation. PC8: Eu- Health and Welfare digitalisation regulatory framework's. PC9: Perspectives of both the public and private health and wellbeing services providers, third sector and health technology companies in order to get knowledge how to make change together in digital transformation. PC10: Concrete steps on how to bring the digital health and wellbeing application in to use considering existing regulation and institutional structures.

(3) COURSE CONTENT

Introduction to Science and Technology Studies (STS) Presentation of the course and the assignment Introduction to key concepts of STS (symmetry, sociotechnical controversies, informational infrastructures, social construction of technology, infrastructures, materiality etc.) A new knowledge production in medicine Understanding the transformation of knowledge production in medicine from the 1970s-80s. Molecularization of life and biotech turn; rise and generalization of clinical trials; genomics. Medical expertise Exploring the medical expertise ecosystem and its recent transformation (rise of agencies; medical activism; co-production of knowledge). The worlds of e-health Understanding the genesis, politics, development and effects on medical labour; focus on the development in the Global South. Big Data and Medicine Understanding what is a medical data and the issues associated; Politics of data; innovation; transformation of medical labour. Gender and Medicine Understanding gender inequalities in medicine; analyzing the role of science in gender assignment. Technoabilities: technology and disability Understanding the worlds of disability and related technological development. Restitution Presentation of student projects and group discussion.

| Learning Outcomes | |
|--|---|
| <p>By the end of the course students will be able to: -understand the basic principles and parameters for business planning in healthcare; -define and identify innovation; - perform/conduct small scale research re professional development opportunities for MDs; - use tools for business planning; -appreciate the role and importance of the entrepreneurship lab -adopt best practices in advancing entrepreneurship -collaborate with other disciplines -evaluate different business initiatives -compare good and bad practices of different enterprises -prepare modern presentations on business planning.</p> | |
| General Competences | |
| <p>Taking into account the generic competences that must be acquired by the graduates of AUTh (as they are described in the Diploma Supplement and presented as followed) which ones are intended by the course?</p> | |
| <p>Retrieve, analyse and synthesise data and information, with the use of necessary technologies</p> <p>Adapt to new situations</p> <p>Make decisions</p> <p>Work autonomously</p> <p>Work in teams</p> <p>Work in an international context</p> <p>Work in an interdisciplinary team</p> <p>Generate new research ideas</p> | <p>Design and manage projects</p> <p>Appreciate diversity and multiculturality</p> <p>Respect natural environment</p> <p>Demonstrate social, professional and ethical commitment and sensitivity to gender issues</p> <p>Be critical and self-critical</p> <p>Advance free, creative and causative thinking</p> <p>.....</p> <p>Other...</p> <p>.....</p> |

Apply knowledge in practice, Retrieve, analyse and synthesise data and information, with the use of necessary technologies, Adapt to new situations, Make decisions, Work in teams, Work in an international context, Work in an interdisciplinary team, Respect natural environment, Advance free, creative and causative thinking

(3) COURSE CONTENT

Introduction: Course overview, objectives, and expectations. Importance of managerial and entrepreneurship skills in healthcare. Innovation Theory and Practice: Theoretical foundations of innovation in healthcare. Strategies for fostering and managing innovation in healthcare organizations. Business Setting and Digital Enterprise Marketing and Management: Digital marketing and effective management techniques for healthcare enterprises. Pitching: Developing presentation skills for effective pitching. Social Innovation: Exploring social innovation initiatives in healthcare. Social Enterprises: Analyzing successful social enterprise models in healthcare. Cases and Exercises: Analyzing real-world cases and exercises in healthcare management. Labs on Business Planning: Practical workshops for developing comprehensive business plans. Application of business planning methodologies and tools in healthcare. Presentation of the Business Plan: Presenting and defending developed business plans. Feedback and improvement opportunities.

(4) DIDACTIC AND LEARNING METHODS - ASSESSMENT

(2) LEARNING OUTCOMES

| Learning Outcomes | |
|---|---|
| <p>After completing the curricular unity the student is able to (LO = learning outcomes)• LO1 identify possibilities and limitations of digitality in individual health decisions• LO2 understand the relevance of regulation and other public policy tools in health promotion• LO3 assess individual behaviour and evaluate the prerequisites for behavioral change• LO4 argue the relevance of behavioral insights in developing digital solutions • LO5 design interventions that promote behavioural change • LO6 estimate the impact of behavioural change interventions at the levels of health and financial benefits</p> | |
| <p>General Competences <i>Taking into account the generic competences that must be acquired by the graduates of AUTh (as they are described in the Diploma Supplement and presented as followed) which ones are intended by the course?</i></p> | |
| <i>Retrieve, analyse and synthesise data and information, with the use of necessary technologies</i> <i>Adapt to new situations</i> <i>Make decisions</i> <i>Work autonomously</i> <i>Work in teams</i> <i>Work in an international context</i> <i>Work in an interdisciplinary team</i> <i>Generate new research ideas</i> | <i>Design and manage projects</i> <i>Appreciate diversity and multiculturality</i> <i>Respect natural environment</i> <i>Demonstrate social, professional and ethical commitment and sensitivity to gender issues</i> <i>Be critical and self-critical</i> <i>Advance free, creative and causative thinking</i> <i>Other...</i> |

Apply knowledge in practice, Retrieve, analyse and synthesise data and information, with the use of necessary technologies, Adapt to new situations, Make decisions, Work in teams, Work in an international context, Work in an interdisciplinary team

(3) COURSE CONTENT

S1 Social and individual approach to the digital transformation in the health sector S1.1 Role and limitations of digitality in individual health S1.2 Regulation and other public policy tools related to public health S2 Applying behavioral insights in health care and health promotion contexts S2.1 Development and evaluation of digital solutions and real life behavioral interventions S2.2 The cognitive biases and heuristics in understanding patients and service providers behaviour S3 Behavioral change principles and interventions as means to improve health outcomes S3.1 Governmental interventions and policies in promoting public health S3.2 Health care professionals role in assisting patients in forming healthy habits S4 Impact assessment of behavioral interventions S4.1 Evaluation of the behavioral change and the related health benefits S4.2 Financial impact and cost effectiveness of the interventions

(2) LEARNING OUTCOMES

| Learning Outcomes | |
|--|---|
| <p>Knowledge: Understand the concepts and principles of systemic service design. Acquire a comprehensive understanding of applicability of service design in healthcare through online studies, interactive lectures, case studies, group discussions, and hands-on experiments. Skills: Acquire skills to apply service design in practice to enhance the systemic development of the social welfare and healthcare service ecosystems. Competencies: Acquire general knowledge of human-centred and systemic service design in the social welfare and healthcare service ecosystems.</p> | |
| General Competences | |
| <i>Taking into account the generic competences that must be acquired by the graduates of AUTH (as they are described in the Diploma Supplement and presented as followed) which ones are intended by the course?</i> | |
| <i>Retrieve, analyse and synthesise data and information, with the use of necessary technologies</i> | <i>Design and manage projects</i> |
| <i>Adapt to new situations</i> | <i>Appreciate diversity and multiculturality</i> |
| <i>Make decisions</i> | <i>Respect natural environment</i> |
| <i>Work autonomously</i> | <i>Demonstrate social, professional and ethical commitment and sensitivity to gender issues</i> |
| <i>Work in teams</i> | <i>Be critical and self-critical</i> |
| <i>Work in an international context</i> | <i>Advance free, creative and causative thinking</i> |
| <i>Work in an interdisciplinary team</i> | |
| <i>Generate new research ideas</i> | <i>Other...</i> |
| | |

Apply knowledge in practice, Retrieve, analyse and synthesise data and information, with the use of necessary technologies, Adapt to new situations, Make decisions, Work in teams, Work in an international context, Work in an interdisciplinary team, Respect natural environment, Advance free, creative and causative thinking

(3) COURSE CONTENT

Pre-assignment (reading, writing key insights on discussion forum) Online kick-off (online 2 hours) Desk Research and stakeholder interviews (remote work between the kick-off and 5-daysprint, individual and team work) 5-Day Co-creation Sprint Week held annually in ManagiDiTH partners' countries about once a year

1. Problem definition
2. Ideation and sketching
3. Deciding and iterating
4. Prototyping and piloting
5. Showcasing results

End Gala Presentations

Note: Students who are unable to participate to the 5-day sprint on-site form their own team and do their assignments online and/or in their local community. The supportive activities and coaching that is part of the 5-day sprint are organised as asynchronous and synchronous online activities.

|---|---|--|-----------------------------------|--------------------------------|--|-----------------------|------------------------------------|--------------------------|---|----------------------|--------------------------------------|
| <p>Analyzing the underlying needs of a healthcare technology problem and suggesting standards to address gaps and provide solutions in healthcare technology applications. Explaining the difference between standards, guidelines, and protocols. Exploring ways to develop or utilize technological systems and/or methodologies to apply standards. Understanding the concepts of data classification and its significance in healthcare. Evaluating different data classifications, terminologies, and standards. Proficiency in using widely adopted health data classifications. Explaining the principles of standardized data exchange formats. Identifying the challenges and opportunities associated with interoperability, reuse, and exchange of health data. Analyzing real-world scenarios to determine data classifications and exchange formats. Applying best practices in data classification and exchange to enhance data management and analysis, as well as business development.</p> | | | | | | | | | | | |

.....

Apply knowledge in practice, Retrieve, analyse and synthesise data and information, with the use of necessary technologies, Adapt to new situations, Make decisions, Work in teams, Work in an international context, Work in an interdisciplinary team, Respect natural environment, Advance free, creative and causative thinking

(3) COURSE CONTENT

1: Introduction to digital health trends and standardization: Data coding, definitions, and classifications. Terminologies and vocabularies. 2: Common data classifications: International Classification of Diseases (ICD). Systematized Nomenclature of Medicine (SNOMED CT). Logical Observation Identifiers Names and Codes (LOINC). International Classification of Health Interventions (ICHI). International Classification of Functioning, Disability, and Health (ICF). Anatomical Therapeutic Chemical Classification System (ATC) and Defined Daily Dose (DDD). 3: Data exchange formats: Health Level Seven (HL7). Fast Healthcare Interoperability Resources (FHIR). Clinical Document Architecture (CDA). 4: Data standards and reuse: Data interoperability challenges. Primary and secondary uses of data. Factors, constraints, and challenges. 5: Case studies and applications.

Apply knowledge in practice, Retrieve, analyse and synthesise data and information, with the use of necessary technologies, Adapt to new situations, Make decisions, Work in teams, Work in an international context, Work in an interdisciplinary team, Respect natural environment, Advance free, creative and causative thinking

(3) COURSE CONTENT

The module aims to explain the concept of interoperability in healthcare systems, emphasising its importance in improving patient care and the flow of health information. To ensure secure and accurate data exchange, it will cover implementing standards and protocols such as HL7, FHIR, and DICOM. The module will also explore emerging technologies revolutionising healthcare data interoperability. Students will learn about the principles of data interoperability, current challenges to achieving interoperability, and emerging technologies such as blockchain, artificial intelligence, and the Internet of Things in enhancing data exchange and sharing in healthcare.

(2) LEARNING OUTCOMES

| Learning Outcomes | |
|--|---|
| <p>Knowledge: Develop a comprehensive understanding of the principles and applications of e-health and telemedicine in the healthcare industry. This includes knowledge of the various technologies and systems used in remote healthcare delivery. Skills: Acquire practical skills in utilizing digital technologies and telecommunication systems for effective remote healthcare services. Students will learn how to apply these technologies to facilitate virtual consultations, remote monitoring, and other telehealth interactions. Competencies: Develop the ability to analyze and address the challenges and ethical considerations associated with e-health and telemedicine. Students will gain the skills to critically evaluate privacy and security issues, as well as ethical dilemmas that arise in the use of digital technologies for healthcare. By achieving these learning outcomes, students will be equipped with the knowledge, skills, and competencies needed to navigate the evolving field of e-health and telemedicine. They will be prepared to contribute to the advancement of remote healthcare delivery and address the ethical and practical challenges that arise in this context.</p> | |

(3) COURSE CONTENT

| |
|---|
| <p>Introduction to E-Health and Telemedicine: Provides an overview of e-health and telemedicine, exploring their benefits and challenges in the healthcare industry. Telecommunication Systems in Healthcare: Examines the use of telecommunication systems for remote healthcare delivery, including teleconsultation, telemonitoring, and teleconferencing. Digital Health Technologies: Explores various digital health technologies, such as electronic health records, mobile health applications, and wearable devices, and their role in improving healthcare delivery. Legal and Ethical Considerations in E-Health and Telemedicine: Discusses the legal and ethical implications of e-health and telemedicine, focusing on privacy, security, and regulatory frameworks that govern the use of digital technologies in healthcare. Implementing E-Health and Telemedicine: Covers the infrastructure requirements and considerations for implementing e-health and telemedicine systems, including interoperability between different healthcare systems. Case Studies and Real-World Examples in E-Health and Telemedicine: Analyzes real-world case studies and examples to provide practical insights into the application and impact of e-health and telemedicine in healthcare settings.</p> |

(2) LEARNING OUTCOMES

| Learning Outcomes | | | | | | | | | | | | | |
|--|---|--|-----------------------------------|--------------------------------|--|-----------------------|------------------------------------|--------------------------|---|----------------------|--------------------------------------|---|--|
| <p>General Information on sensors and Instrumentation General knowledges concerning sensor classification, principles and application, Sensors conditioning and Instrumentation amplifier Sleep pathologies Understanding sleep disorders, biomedical sensors to perform a sleep exam Instrumentation for Electrophysiological measurements General knowledge on neurons and electrophysiology, Instrumentation associated, Basic Signal treatment for ECG/EMG/EEG. Miniaturization and integration Knowledge in sensors miniaturization, Microfluidics and Lab-On-a-Chip: context and market Monitoring electrical properties of living one Understanding Bioimpedance, Use of Bioimpedance to monitor physiological state Synthesis and Oral Defense Analysis of a topics relative to sensors for medical instrumentation: bibliography analysis for a short synthesis (report writing) and oral defense (short video recording).</p> | | | | | | | | | | | | | |
| <p>General Competences <i>Taking into account the generic competences that must be acquired by the graduates of AUTH (as they are described in the Diploma Supplement and presented as followed) which ones are intended by the course?</i></p> <table border="0"> <tr> <td><i>Retrieve, analyse and synthesise data and information, with the use of necessary technologies</i></td> <td><i>Design and manage projects</i></td> </tr> <tr> <td><i>Adapt to new situations</i></td> <td><i>Appreciate diversity and multiculturality</i></td> </tr> <tr> <td><i>Make decisions</i></td> <td><i>Respect natural environment</i></td> </tr> <tr> <td><i>Work autonomously</i></td> <td><i>Demonstrate social, professional and ethical commitment and sensitivity to gender issues</i></td> </tr> <tr> <td><i>Work in teams</i></td> <td><i>Be critical and self-critical</i></td> </tr> <tr> <td><i>Work in an international context</i></td> <td><i>Advance free, creative and causative thinking</i></td> </tr> </table> | | <i>Retrieve, analyse and synthesise data and information, with the use of necessary technologies</i> | <i>Design and manage projects</i> | <i>Adapt to new situations</i> | <i>Appreciate diversity and multiculturality</i> | <i>Make decisions</i> | <i>Respect natural environment</i> | <i>Work autonomously</i> | <i>Demonstrate social, professional and ethical commitment and sensitivity to gender issues</i> | <i>Work in teams</i> | <i>Be critical and self-critical</i> | <i>Work in an international context</i> | <i>Advance free, creative and causative thinking</i> |
| <i>Retrieve, analyse and synthesise data and information, with the use of necessary technologies</i> | <i>Design and manage projects</i> | | | | | | | | | | | | |
| <i>Adapt to new situations</i> | <i>Appreciate diversity and multiculturality</i> | | | | | | | | | | | | |
| <i>Make decisions</i> | <i>Respect natural environment</i> | | | | | | | | | | | | |
| <i>Work autonomously</i> | <i>Demonstrate social, professional and ethical commitment and sensitivity to gender issues</i> | | | | | | | | | | | | |
| <i>Work in teams</i> | <i>Be critical and self-critical</i> | | | | | | | | | | | | |
| <i>Work in an international context</i> | <i>Advance free, creative and causative thinking</i> | | | | | | | | | | | | |

Work in an interdisciplinary team
Generate new research ideas

.....
Other...
.....

Apply knowledge in practice, Retrieve, analyse and synthesise data and information, with the use of necessary technologies, Adapt to new situations, Make decisions, Work in teams, Work in an international context, Work in an interdisciplinary team, Respect natural environment, Advance free, creative and causative thinking

(3) COURSE CONTENT

General Information on sensors and Instrumentation (8 hours) Sleep pathologies (8 hours) Instrumentation for Electrophysiological measurements (8 hours) Miniaturization and integration (8 hours) Monitoring electrical properties of living one (8 hours) Synthesis and Oral Defense (10 hours)

(4) DIDACTIC AND LEARNING METHODS - ASSESSMENT

| MODE OF DELIVERY <i>Face to face, Distance Learning</i> | Distance learning | | | | | | | | | | | | | |

(2) LEARNING OUTCOMES

| Learning Outcomes | |
|---|---|
| <p>Acquire the capacity to undertake research independently. Know how to develop a review based on relevant literature in a given-scientific field. Select one or more methodological approaches to achieve the project. Know how to validate the artifacts that constitute the solution to the chosen problem and identify the corresponding validity threats. Have learned about the complexity and how to prepare a successful master dissertation with high quality, both in form and content. To be able to present a technical-scientific problem and its motivation, to produce appropriate and validated solutions.</p> | |
| <p>General Competences <i>Taking into account the generic competences that must be acquired by the graduates of AUTH (as they are described in the Diploma Supplement and presented as followed) which ones are intended by the course?</i></p> | |
| <i>Retrieve, analyse and synthesise data and information, with the use of necessary technologies</i> <i>Adapt to new situations</i> <i>Make decisions</i> <i>Work autonomously</i> <i>Work in teams</i> <i>Work in an international context</i> <i>Work in an interdisciplinary team</i> <i>Generate new research ideas</i> | <i>Design and manage projects</i> <i>Appreciate diversity and multiculturality</i> <i>Respect natural environment</i> <i>Demonstrate social, professional and ethical commitment and sensitivity to gender issues</i> <i>Be critical and self-critical</i> <i>Advance free, creative and causative thinking</i> <i>Other...</i> |
| <p>Apply knowledge in practice, Retrieve, analyse and synthesise data and information, with the use of necessary technologies, Adapt to new situations, Make decisions, Work in</p> | |

teams, Work in an international context, Work in an interdisciplinary team, Respect natural environment, Advance free, creative and causative thinking

(3) COURSE CONTENT

The work program starts from a topic raised by the student's intellectual interest, a topic that will be addressed according to a customized program of work to be agreed with the supervisor. Notwithstanding this, the work to be done must materialize in a "paper" containing:

1. The formulation of a question or a problem, theoretically capable of having an appropriate response through the mobilization of scientific research methodology.
2. A review of the theoretical issues underlying the question above, obtained through research, analysis and critical interpretation of the latest internationally accepted scientific literature.
3. In coordination with the earlier theoretical balance, the dissertation must contain an exercise (theoretical and / or empirical) that complements an innovative way to approach the topic under investigation.
4. Finally, the dissertation must contain a conclusive synthesis answering the research starting point, as well as suggestions for further research.

(4) DIDACTIC AND LEARNING METHODS - ASSESSMENT

| <p>MODE OF DELIVERY <i>Face to face, Distance Learning</i></p> | Distance learning | | | | | | | |
